

## DISTRICT CONTINUOUS IMPROVEMENT GOALS

Provide professional development opportunities within the district in an effort to improve student achievement, especially in the targeted areas of reading (informational text, vocabulary), mathematics, and science. Special emphasis will be given to the needs of all levels of learners through professional development in differentiation of instruction and technology integration across the curriculum.

Improve instructional practice in core content areas through district-wide use of research based strategies including differentiated instruction strategies, data analysis, and through the use of formative, short-cycle assessments in target content areas while ensuring curriculum alignment. The District will monitor the use of assessments and curriculum alignment through observation, mapping, teacher evaluation, and other reporting measures including pre and post assessments.

Convey to all schools, parents, and community members, the established goals of the district. Explain performance targets to all staff members, and ensure that the building goals are aligned to, and are designed to help meet the goals of the district.
